

The only Container an aspiration needle should be in is a Sharps Container

- What other Needle do you reuse in your hospital? (NONE!)
- Needle stick danger in the OR and SPD
- Needle is impossible to effectively clean
- Bent tips and burrs compromise the function of the needle and cause potential for injury
- Aspiration isn't done on every procedure, why introduce the risk of a sharp in your tray?
- Needle tip with tip guard compromises internal sterility
- Needle tip can potentially damage other instruments in your set
